

Use the ASR framework in your next assignment!

Reading for depth happens when you Activate, Support, and Reveal student thinking. Try these practices in your next assignment.

Creating your assignment

Activate

- Add the learning objective for the assignment in your directions to focus student reading.

Support

- Insert 1 scaffolding note with an image or video that helps explain a complex idea.

Instructions for your students while reading

Activate

- Ask students to take 2 notes related to your learning objective. Encourage them to categorize their notes to drive metacognition.

Support

- Ask students to look up at least 2 words using the built-in dictionary to increase awareness of new vocabulary.

Grading your assignment

Reveal

- Grade 1 short answer question in class as students are working to provide them with immediate feedback.
 - Bonus: Give them a chance to revise their response to put that feedback promptly into action!

Reveal

- Anonymize student names and grade 1 question as a class to clarify expectations for student work.
